Contents

Acknowledgements	ix
1 Introduction	1
Some tips before starting	3
Initial steps	6
The file registers	11
A program template	14
2 Exploring the PIC5x series	21
Your first program	21
Testing the program	23
Hardware	24
Simulating	27
Emulation	28
Blowing a PIC	28
Using the testing instructions	30
Timing	34
Seven-segment displays	48
Logic gates	71
The watchdog timer	78
Final instructions	83
Indirect addressing	83
The STATUS file register	87
The carry and digit carry flags	88
Pages	90
What caused the PIC to reset?	92
Some useful (but not vital) tricks	93
Final PIC5x program – 'bike buddy'	93
3 Exploring the P16C71	98
Why use the P16C7x series?	98
The inner differences: an extra bank	99
A different way of setting up	101
New file registers	102

What are interrupts? 103
The program has interrupted ... what next? 105
A new program template 107
Analogue to digital conversion: what is it? 114
ADCON0 115
ADCON1 116
Some final points 121
Final PIC71 program 122

4 The new P12C50x series (8 pin PICs) 139
Why use the P12C50x series? 139
The main differences 139
A template for the P12C50x 142
Sample project 143

5 A brief introduction to the P16C84 147

6 Looking to the future 148

7 Sample programs 150
Program A LedOn – Turns an LED on 150
Program B PushButton (1.0) – If a push button is pressed, turns on an LED 151
Program C PushButton (2.0) – Shorter version of PushButton 1.0 152
Program D Timing – LED states toggled every second, and buzzer on every five seconds 153
Program E Traffic – Pedestrian traffic lights junction is simulated 154
Program F Counter (1.0) – Counts signals from a push button, resets after 16. 159
Program G Counter (2.0) – Stop reading button twice (otherwise, as Counter 1.0) 160
Program H Counter (3.0) – Solves button bounce (otherwise, as Counter 2.0) 162
Program I StopClock – A stop clock displaying tenths of seconds to minutes 165
Program J LogicGates – Acts as the eight different gates 170
Program K Alarm –An alarm system which can be set or disabled 173
Program L BikeBuddy – A speedometer and mileometer for bikes 174
Program M Quiz – Indicates which of four push buttons has been pressed first 180
Program N TempSense – Displays whether temperature is too hot, too cold or OK 182
Program O RanLott – A multipurpose random number generator 184
Program P Diamond – An electronic diamond brooch 198

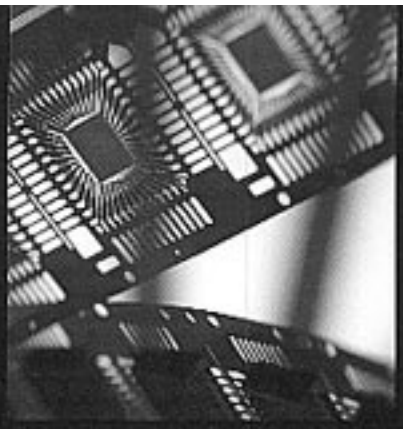
Appendix A	Specifications of some PICs	200
Appendix B	Pin layouts of various PICs	201
Appendix C	Quick reference	202
Appendix D	If all else fails, read this	210
Appendix E	Some useful contact information	211
Appendix F	Ordering project PCBs	212
Appendix G	References and further reading	214
Appendix H	Answers to the exercises	215
Index		241

MICROELECTRONICS

John Morton

PIC

YOUR PERSONAL INTRODUCTORY COURSE



Convert a daunting piece of modern technology into a successful and flexible part of your electronics toolkit: learn about the PIC chip the easy way with **PIC: Your Personal Introductory Course**.

This book guides a PIC user from their first sight of a PIC microcontroller to making the PIC work in the real world. Detailed examples show just how powerful and useful a PIC can be. Explanations are short and simple enough to let a reader get to grips with the PIC without fuss.
